- Infrastructure Installation and Administration

Please visit our website www.ArchesSoftware.com, or contact us at **(617) 875-4535** for a **FREE EVALUATION** of your computer environment and **FREE PROPOSAL** of how Arches Software will ...

- maximize your business potential through custom application development and support
- automate and optimize your business processes
- safeguard your critical data against malicious attack or other unforeseen circumstances
- enhance and improve your hardware usage and efficiency

Arches Software provides the following services:

- **Application Development Services** – Design, build & maintain custom Windows and web applications and sites
- **Technology Infrastructure Management** – Design, implement, manage and support networks and machine environments
- **Database Administration Services** – Full Database Administration for Microsoft SQL Server
- **Software Installation & Support** – Install and support custom and purchased software
- **Disaster-Recovery/Business Continuity** – Analysis and implementation of Disaster Recovery/Business Continuity plans, and computer data backups

Our mission is to provide highly-skilled computer expertise and solutions that solve your business challenges, allowing you to focus on running your business. Our implementation structure allows us to remotely manage network resources, remotely install software packages, apply updates and make configuration changes. Remote connections also allow us to troubleshoot unanticipated network problems, and solve individual user issues quickly and efficiently while keeping costs to a minimum.

Possessing the skills and experience necessary from a *hardware, software, networking* and *security* perspective allows us to support all areas of technology. Our ability to design, implement and manage all of these areas achieves a solid backbone and cohesive environment so you and/or your employees are free to focus on your business.
